

HYDRAULIC MOTORS

Introduction to Haldex Hydraulic Motor Capability

Haldex offers one of the widest selections of gear pumps and hydraulic motors in the industry. All Haldex products are designed to provide solutions to our customers' application challenges. Haldex hydraulic motors are applied on turf care equipment, agricultural equipment, industrial sweepers, paving machinery, winches

and fan drives for a number of off-highway vehicles. They are specified by leading equipment manufacturers throughout the mobile equipment market.

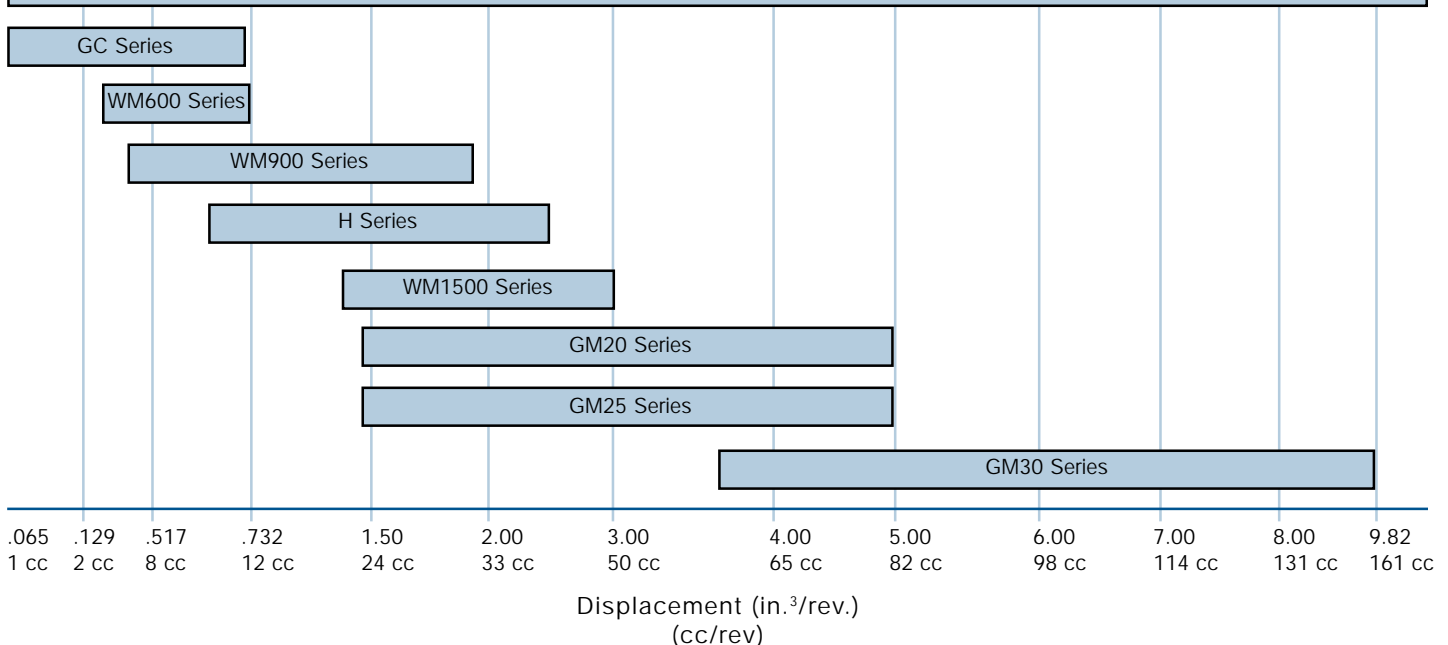

The Haldex line of hydraulic motors covers a displacement range from .065 in.³ (1 cc) to 9.82 in.³ (161 cc). The

various series include cast iron fixed clearance, aluminum body pressure balanced, and cast iron pressure balanced designs. Both unidirectional and birotational configurations are available. Each series offers a large selection of shaft, flange and valve options to meet your application requirements.

GC Hydraulic Motor Shaft Seal Capabilities

To insure that the performance capabilities of the shaft seal are not exceeded, use the chart below. Multiply as follows: (PV Factor = PSI x Shaft Dia. (in.) x π (3.1415926) x RPM. Take this value and \div by 12 in./ft.). This figure must not exceed the Pressure / Velocity factor shown in column 4. Outlet pressure on a uni-directional motor or case drain pressure on a bi-rotational motor must not exceed seal pressure ratings.

FLUIDS - Most premium grade petroleum base fluids can be used with GC Motors. Optimum operating viscosity is 16-63 cSt (80-288 SSU) at maximum rated speed. Minimum operating viscosity is 10 cSt (59 SSU). Maximum operating viscosity is 750 cSt (3409 SSU). Maximum cold start viscosity is 2000 cSt (9091 SSU). Contact us for additional information regarding the GC performance using other fluids.

OPERATING TEMPERATURES -

Fluid temperature range (Mineral Oil):

Max. 93°C (200°F) continuous and

Installation Information

FLUIDS - Most premium grade petroleum base fluids can be used with WM1500 Motors. Optimum operating viscosity is 16-40 cSt (80 - 185 SSU) at maximum rated speed. Minimum operating viscosity is 10 cSt (59 SSU). Maximum operating viscosity is 750 cSt (3409 SSU). Maximum cold start viscosity is 2000

cSt (9091 SSU). Contact Haldex for additional information regarding the W1500 performance using other fluids.

OPERATING TEMPERATURES - Fluid temperature range (Mineral Oil): Max. 93°C (200°F) continuous and Max. 105°C (221°F) intermittent.

FILTRATION - Proper filtration is critical to the trouble free operation of any hydraulic system. For optimum motor life at maximum pressure ISO 4406/1986 (Code 18/14) is recommended. A 10-micron filter sized to accommodate full system return flow is recommended for most operating environments.

Hydraulic Spindle Motors

Hydraulic Blade Drive Systems for Rotary Turf Mowers

Compared to Mechanical Drive Systems, hydraulic spindle motors have no belts to adjust or replace resulting in less down time, lower maintenance costs; excellent in wet conditions; no belt slippage; faster cutting; no belt stretching; allows for flexibility in mower design with no belts to accommodate; and fewer components make for a lighter weight system. Contact Haldex regarding your spindle motor application.
