

"It Ain't a 'Pigtail' Unless It's Curly!!"

Introducing the **FLEXEEL Curly™** Pigtail

FPC05034TR / Flexeel Lead-In Coil 5/16" x 3', 1/4" MPT Rigid & Swivel

FPC05036TR / Flexeel Lead-In Coil 5/16" x 3', 3/8" MPT Rigid & Swivel

Offering practical and durable design features that will optimize the service life and overall performance of your air hose supply!

Why use a pigtail hose assembly?

- PROTECT THE AIR SUPPLY HOSE as stress and wear points caused by bending, flexing and pulling are eliminated
- EXTEND THE LIFE OF THE COUPLER by acting as a shock absorber and protect it from tool vibration
- ALLOW THE USER A WIDER RANGE OF MOTION, reducing worker fatigue and increasing production by facilitating tool maneuverability

Advantages of **FLEXEEL Curly™** Pigtail over Straight Pigtail

- 1 **FLEXEEL Curly™** has a small bend radius and a tight coil diameter that keeps work area free of clutter
- 2 **FLEXEEL Curly™** is completely kink resistant, no matter how much the pigtail is tugged or twisted
- 3 **FLEXEEL Curly™** has a 5/16" inside diameter hose that provides enough flow to accommodate 3/8" outside diameter supply hose without added weight
- 4 **FLEXEEL Curly™** has a specially designed strain relief on its working end which protects the hose at its weakest point, at the fitting, while still allowing superior flexibility

Straight Pigtail Assembly

FLEXEEL Curly™ Pigtail with swivel fitting at tool end

The **FLEXEEL®** Brand Material Marks a Difference in Quality ...

"INTEGRAL" CONSTRUCTION PREVENTS INNER TUBE, BRAIDING AND OUTER COVER FROM SEPARATING DUE TO PULSATING, BENDING, FLEXING AND PULLING AS THEY DO WITH CONVENTIONALLY BONDED LAYERS OF RUBBER AND THERMOPLASTIC HOSES

- Amazingly tough, kink resistant and flexible even in extremely cold environments
- Extremely lightweight innerbraided polyurethane air hose (200 PSI working pressure)
