Fast, easy and reliable - with the product finder and our online tools

The product finder allows you to get to the suitable product in just a few steps. For this purpose either make use of the search function if you already know the product or use the full-text search which guides you to the requested result via various product-specific filters. Our selection

tools speed up the detailed product selection. Few technical data suffice to rapidly find the right product for your application in the configurators - without having to browse catalogues lengthily.

The suitable product for your application - fast
and simple with our product finder.

DID YOU KNOW ...

that couplings, brakes and hydraulic components are part of our scope of supply, too?
Details are available at ktr.com.

POSSIBLE COMBINATIONS

Our cooling systems are available as a package with our drive components.

Perfect in Combination with our
COUPLINGS

Those who value KTR as a manufacturer will love us as a partner.

KTR provides the mechanical and plant engineering with an extensive portfolio of high-quality drive and hydraulic components as well as braking and cooling systems. We are pleased to be at your service during the designing stage and develop tailor-made solutions for you. Perfectly organized logistics, global presence via 24 subsidiary companies and more than 90 distribution partners along with an international network consisting of 8 production sites are the prerequisite for quick delivery. When it comes to service we ensure short distances along with competent and personal support.

**„Customised
solutions – for every
application.“**

Franz-Josef Hoffmann, Engineered Business Cooling Systems

**Wherever motion is essential,
we have the right answer.**

Drive Technology

Mechanical components are and will remain essential in drive technology. The industry's demands on components grow continuously: energy efficiency, power density, ease of servicing and electronification. Our portfolio includes couplings and torque limiters, clamping sets and universal joints as well as torque measuring shafts.

Brake systems

Our hydraulic and electromechanical brake systems are globally used in various industries. Customer preference and parameters of the application decide on the selection of the right brake.

Hydraulic components

For almost 50 years we have provided the industry with a continuously growing range of hydraulic components from our in-house development and manufacturing: accurate selection, high-quality processing, quick availability.

Cooling systems

As a customised product or standard solution, multimedum or oil/air cooler, for mobile machines or stationary hydraulics, optionally available as a marine or ATEX version, powerful and efficient.

Engineering, project management and personal advice

Tailor-made solutions: customised and application-specific

Combined cooler type MMC

Cooling systems

Overview of the MMC cooling system

Depending on the application features, our multiple-circuit coolers series MMC (Mobile Machinery Cooler) combine different media such as oil, water, fuel and air in one single cooling system. Main application ranges are engine cooling in agricultural and construction machinery, stationary I. C.-engines. Tailor-made coolers for hydraulic applications as well as cooling of compressors supplement the MMC portfolio. Every MMC cooler is a project-specific version that is calculated and developed by our engineers for the very special application.

MMC series

- customised design
- single-circuit and multiple-circuit coolers
- project-specific selection
- performance simulation for application-specific data generation
- cooling of engines, hydraulic oil and compressed air

**CUSTOMISED
SOLUTIONS**

Compressors

Oil/air coolers

Cooling systems

Overview of the OAC cooling system

The oil/air coolers type OAC and OPC are compact and high-performance coolers for cooling hydraulic, gear, lubricating and motor oils as well as water glycol. Main applications are hydraulic power packs, machine tools, hydraulic presses, wind power and rail technology as well as iron and steel industry. Apart from marine and ATEX versions the coolers are available in combination with thermal or pressure bypass valves.

OAC series

- defined portfolio of oil coolers
- single-circuit coolers
- performance-related product selection
- recorded in catalogue tables

Gearbox

Combined cooler type MMC Cooling systems

Application-specific system development

- Every cooler is a unique copy
- Competent support throughout the entire development cycle: From development of ideas through simulation to series of prototypes, start-up and series production.
- Services by R + D: Visual inspection, pressure testing, pressure threshold testing, optimum pressure testing, initial sample inspection
- 24 subsidiary companies globally for supporting your projects locally

Measuring test bench for determining actual performance data of specifically designed heat exchangers

- cooling water circuit
- cooling of charge air
- cooling of hydraulic and gear oil
- provides validation of performance data
- supports innovative developments
- optimises application-specific developments
- allows for transfer of know-how
- ...

Selection

To determine an optimum cooling system for your individual application we count on our specifically programmed selection software. The data stored are not only based on wind tunnel measurements, but also on CFD simulations. The basis for the calculation is the determination and assessment of application-specific parameters and influence factors. Our engineers support the projects with know-how and experience to the finished product in your application.

Combined cooler type MMC

Cooling systems

Structure

The MMC cooler is a high-performance cooler made of aluminium. It combines several cooling circuits, for example for charge air, water and oil in one single system. The design of the cooler is specifically suitable for heavy duty applications. The laminae are selected based on thermal and hydraulic parameters. The depth of the cooler cores may vary between 32 mm and 200 mm. The cooler dimensions are specifically adapted to the respective mounting space. Here sizes up to 2000 mm are feasible. The selection of the fan is based on the requirements calculated such as mass flow, noise generation, speeds, etc. When designing the drive there is the option to select between a direct fan drive, an electric motor adapted to the operating parameters or a hydro motor.

Laminae structure

The core of our cooling systems as a proven plate and bar technology. The different shapes of the laminae structures allow for an infinite variety of types which are accurately selected and tailored for your application.

Combined cooler type MMC

Cooling systems

Manufacturing expertise in our own plant

Our new cooler production plant in Jiaxing located 100 kilometers southwest of Shanghai commenced operations at the end of 2018. On an effective area of about 9,000 m² we manufacture high-quality cooling systems for the global market being used as multimedius coolers in construction and agricultural machinery or as oil/air coolers in stationary hydraulics.

For that purpose we invested in a state-of-the-art machinery park. Joachim Grunwald, Product Manager of MMC combined coolers: „We are in a position to manufacture smaller quantities with a high level of automation and consequently at a constantly high quality level here." There is a very close cooperation between the manufacturing specialists in Jiaxing and the design engineers and project managers in Rheine. Since the team of engineers at KTR's headquarters in Rheine/ Germany is and remains responsible for the development of the cooling systems.

Customers' benefits at a glance

- **Higher capacity**
Availability ensured by the expansion of production capacity.
- **Optimised delivery times**
Customised delivery times by individual production planning and capacity.
- **Optimised access to quality**
State-of-the-art production lines, robotic welding systems and our qualified staff ensure a high level of quality.
- **Future-oriented engineering**
Due to the combination of project management, development, designing and production we bring together all process steps in one location.

Combined cooler type MMC

Cooling systems

Various applications

Examples of references

Weycor wheel loader AR530 by Atlas Weyhausen

The wheel loader is one of the medium size types of the portfolio equipped with a water-cooled 4-cylinder DEUTZ engine series TCD 3.6 L4 High Torque with a 3.6 litres displacement and a maximum power of 55 kW.

KTR was commissioned with the selection of the cooling system. For cooling charge air, cooling water and hydraulics a triple-circuit combined cooler type MMC is used.

Open Power Unit by Hatz

The diesel engine manufacturer located in Lower Bavaria provides all variants of the new H series as a pre-finished open power unit. The standard model, the water-cooled 4-cylinder 4H50TIC with 2 litres displacement and a maximum power of 55 kW counts on common rail technology, turbo loader and external exhaust gas recirculation.

For cooling charge air and engine cooling water a dual-circuit combined cooler type MMC by KTR which was dimensioned in cooperation with Hatz is used. In addition the scope of delivery comprises a compact oil cooler installed at the engine side cooling the engine oil via the engine cooling water.

Online tool for oil/air coolers type OAC

„The suitable cooler for your application – available within short term.“

Christoph Bettmer, Core Business Hydraulics/Product Manager

STANDARD DESIGN

Exclusively for OAC oil/air coolers.

Our online tool makes selecting easy for you: Based on the data you enter such as ambient and oil temperatures, installation height and requested fan drive the tool calculates the suitable cooler promptly. Apart from that you are provided with clear data processing and a descriptive 3D model as well as a link to our online shop.

otools.ktr.com

Ölkühler Öl-Luftkühler Typ „OAC“

- Einsetzbar für Hydrauliköl, Getriebeöl, Schmieröl, Motoröl und Wasser-Glykol
- Kühlleistung bis 280kW
- Niedriger Schalldruckpegel

Ölkühler Öl-Luftkühler Typ „OAC“

Oil/air cooler type OAC

Cooling systems

High-performance cooling of hydraulic and lubricating oils

A compact and high-performance cooler series comprising twelve sizes was developed for high-performance cooling of hydraulic and lubricating oils.

Applications:

- Construction machines
- Agricultural machines
- Rail technology
- Machine tools
- Hydraulic power packs
- Wind power
- Hydraulic presses
- Iron and steel industry etc.

Applicable for cooling of:

- Hydraulic oil
- Gear oil
- Lubricating oil
- Water glycol (min. 40 % glycol)

Structure:

- Cooler core (plate and bar) made of aluminium with industrial laminae in black (RAL 9005)
- Fan cover made of steel in black (RAL 9005)
- Fan made of nylon PAG
- Protective grid made of steel in black (RAL 9005)
- Fan 12/24V IP68, 230/400V, 400/690V, IP55
- Fan with hydraulic drive

Marine design:

- Cooler core, frame, fan cover with double-component paint
- Electric motor with special paint and protection class IP56

ATEX design:

- Gas sector:  II 2G Ex h IIC T6...T3 Gb X
- Dust sector:  II 3D Ex h IIIC T68 °C...110 °C Gb X
- Ambient temperature $-40\text{ °C} < T_a < +55\text{ °C}$
- Motor and fan as an adequate ATEX design

Accessories (see page 41 et seq.):

- Thermal bypass valves
- Oil thermostat valve (OTV)
- Protective grid
- Temperature switch (TSC)
- Speed-controlled operation

The OAC coolers have to be protected from direct solar radiation.

Selection system

To select the suitable cooler you need to know the following details:

Q [kW]	Heat to be dissipated
V [l/min]	Oil flow
T _{oil} [°C]	Inlet temperature of oil into cooler
T _L [°C]	Inlet temperature of ambient air into cooler

Example of calculation

Details given:

Q = 12 kW

V = 75 l/min

T_{oil} = 65 °C

T_L = 30 °C

Performance diagramme of OAC400

Calculation of specific cooling capacity

Difference of inlet temperature ETD [°C] = T_{oil} - T_L

Specific cooling capacity required P_{requ.} = Q/ETD

The specific cooling capacity required must fall below the performance curve! → 12 kW/(65 °C - 30 °C) = 0.34 kW/°C

The following was selected: OAC400

The actual cooling capacity of the cooler is 0.39 kW/°C x 35 °C = 13.65 kW

Calculation of pressure loss

The pressure loss in the curves of the different data sheets is based on a viscosity of 30 cSt.

The effective pressure loss is calculated as follows:

Pressure loss (from curve) x factor = effective pressure loss

Example

V_{oil}: 75 l/min

Viscosity: 20 cSt

→ 0.31 bar x 0.75 = 0.233 bar

Pressure loss 30 cSt

Conversion factor of pressure loss

cSt	10	15	20	30	40	50	60	80	100
Factor	0.5	0.65	0.75	1	1.2	1.4	1.6	2.1	2.8

Oil/air cooler / cooling-pumping unit type OPC

Cooling systems

Bypass flow cooling with integrated pump

The OPC oil cooler unit is a system specifically developed for cooling in the bypass flow as an independent unit. The unit consists of a cooler, fan, electric motor, pump and may be supplemented by a filter on request of the customer.

Applications:

- Machine tools
- Elevators
- Test benches
- Add-on coolers
- Bypass flow cooling

Applicable for cooling of:

- Hydraulic oil
- Gear oil
- Lubricating oil
- Water glycol (min. 50 % glycol)

Structure:

- Cooler core (plate and bar) made of aluminium with industrial laminae in black (RAL 9005)
- Fan cover made of steel in black (RAL 9005)
- Fan made of nylon PAG
- Protective grid made of steel in black (RAL 9005)
- Electric motor 230/400V, IP55
- Bellhousing and coupling
- Gear feed pump with pressure relief valve 0 - 15 bars, recommended setting 5 bars,
 - max. medium temperature 90 °C (higher temperature on request),
 - low-noise pump, also for high viscosities
- Filter with visual maintenance display, as an option

Marine design:

- Cooler core, frame, fan cover with double-component paint
- Electric motor with special paint and protection class IP56

ATEX design:

- Gas sector: Ex II 2G Ex h IIC T6...T3 Gb X
- Dust sector: Ex II 3D Ex h IIIC T68 °C...110 °C Gb X
- Ambient temperature -40 °C < Ta < +55 °C
- Motor and fan as an adequate ATEX design

Accessories (see page 41 et seq.):

- Thermal bypass valves
- Oil thermostat valve (OTV)
- Protective grid
- Temperature switch (TSC)

The OPC coolers have to be protected from direct solar radiation.

Oil/air cooler OAC / cooling-pumping unit type OPC

Cooling systems

Cooler accessories

Thermal & pressure bypass (TB)

The integrated thermal and pressure bypass additionally provides for faster return of the oil passing the cooler core to reach the operating temperature efficiently through the load. Safeguarding the pressure is assured in parallel.

Pressure bypass (DB)

Integrated pressure bypass protecting the cooler core against excess pressure. A share of the volume flow is bypassed along the cooler core depending on the opening pressure.

Soft start-up control and variable-speed operation for coolers with direct current motors (12 & 24V)

The soft start-up makes sure the motor exceeds the nominal current consumption by a maximum of 10 %, the motor accelerates slowly with increasing temperatures not overloading the current supply. Depending on temperature the motor makes sure that only as much cooling capacity as actually needed is provided. The motor starts from an oil inlet temperature of 40 °C reaching its max. speed with 60 °C.

An automatic reverse operation can be integrated in the control unit to purge the cooler core.

An existing cooler can be retrofitted or provided with the control unit immediately ex works.

Frequency converter operation for coolers with three-phase motors

All coolers can be supplied with frequency converter ex works to reduce the noise emissions. The oil inlet temperature is used as a signal for the frequency converter via PT100 to reduce or increase the speed, if necessary. Appropriate ramps are pre-installed or can be defined by the customer. This allows the motor to run a frequency band from 35 - 50 Hz or run up to 60 Hz with an adequate motor dimensioning to provide for sufficient reserve with temperature peaks.

TEMPERATURE CONTROL AND MONITORING

HYDRAULIC COMPONENTS

Cooler accessories - temperature switch TSC

- Simple, solid design
- Electrical insert easy to disassemble
- With plug acc. to DIN 43650 straight cable outlet direction rotatable by 360°
- Copper seal
- Protection class IP65

Technical data		
Switching element:	Bi metal	Switching point:
Switching operation:	NO = make contact	TSC 40 = 40 °C
Switching temperature:	+25 °C to +80 °C	TSC 50 = 50 °C
Material of probe:	Brass	TSC 60 = 60 °C
Max. operating pressure:	26 bars	TSC 70 = 70 °C
Operating temperature:	20 °C to +100 °C	
Plug:	According to DIN 43650 - 3 poles + PE, protection class IP65, cable gland PG11	

Temperature contacts: Max. operating voltage: 250V AC - 8 A
 24V DC - 5A
 Max. switching current: 2 A
 Tolerance: ±5 K
 Switch-back difference: 15 K ±3 K

Ordering example:	TSC	50
	Temperature switch	Switching point 50 °C

Oil thermostat valve

A: Pump
B: Load

C: Governor valve
D: Cooler

Use as a short circuit control:
Constant temperature on load outlet

Use as a mixing valve:
Constant temperature on load inlet

Main applications of oil thermostat valves

- Agricultural machines
- Construction machines
- Compressors
- Coolers
- Special applications, e. g. wind turbines, gearboxes, hydraulics, general engineering

Particular characteristics

- Temperature figures set
- High control accuracy
- Control operation regardless of static and dynamic oil pressure
- Low pressure loss
- Sound design
- Insensitive to vibrations
- Insensitive to shocks
- Operation independent of the mounting situation
- Maintenance-free
- Long service life

OTV Oil thermostat valve				
Description	Max. volume flow [m³/h]	Connection thread	Inlet temperature [°C]	Max. inflow to the cooler obtained with °C

TEMPERATURE CONTROL AND MONITORING

HYDRAULIC COMPONENTS

Cooler accessories - filters

Single or double filter with mounting cartridge and visual display for separating dirt particles.

Options:

- 10 µm or 25 µm depending on volume flow, oil type and temperature
- Filter attachment for electrical signals available
- Protective coating for use with salty ambient air

Oil/air cooler / cooling-pumping unit type OPC

Cooling systems

Cooler accessories

Flow switch

- Measuring range 1 - 50 l/min (other on request)
- G1" connection thread
- Supply voltage 10 - 30 V DC

Pressure display

- Manometer for inspecting the current operating pressure

Pressure switch

- Adjustable from 1 - 16 bars
- G1/4" connection thread
- Applicable on cooler inlet or outlet

Protective grid

Protection against rough damages of cooling laminas via corrugated wire mesh (10 x 10 mm). Optionally a filter pad is available protecting against smaller particles (dust, sand). Please consider a reduction of performance depending on load.

Type of cooler	Size	Temperature switch	Filter			Protective grid

** In case of an engine speed of ≥ 1900 rpm a steel fan must be used.

Assembly

With assembly and disassembly of the oil connection lines hold up with a hexagon key (max. tightening torque 40 Nm). No reduction of the cross section behind the cooler. Return filter to be installed in front of the cooler (dynamic pressure, danger of bursting). Tensions inside the connection pipes have to be avoided! Vibration of the piping has to be avoided (should possibly be intercepted in front of the connector). Supply and discharge to be chosen alternatively. Please note that not a few hydraulic systems generate pressure peaks of more than 12 bars in the return flow (danger of bursting)! Please observe our assembly instructions at www.ktr.com.

For PIK sizes 200 and 350 specify the IEC motor sizes in your order.

Ordering example:	PIK	300	3	5	15
	Bellhousing with integrated oil cooler	Flange diameter of IEC motor	Serial model code (code referring to length)	In-house modification code	Standard type 15 - V1 design

Oil/air cooler type PIK

Cooling systems

Oil/air cooler type PIK 200 - 350

1. Cooling capacity for a speed of 1500 rpm depending on the temperature difference between oil intake and air intake and oil volume

PIK 200

PIK 250

PIK 300

PIK 350

The diagrams shown are based on actual measurements of the PIK oil cooler performed in KTR's in-house R&D test center. With 3000 rpm the cooling capacity is increased by approx. 50 %.

2. Operating pressure

The permissible operating pressure of the oil cooler is 12 bars dynamically. Max. operating pressure with static load 20 bars (all values apply for the average pressure cooler).

3. Pressure difference depending on oil flow and oil viscosity

PIK 200

PIK 250

PIK 300

PIK 350

Viscosity measured up to 100 mm²/s.
Higher viscosity on request.

4. Fan

Torsional direction view onto the pump – **right** – standard type.

Performance requirement of the fan with 1500 rpm

PIK 200 = 25 W

PIK 250 = 40 W

PIK 300 = 125 W

PIK 350 = 230 W

Air pressure rate in m³/h with 1500 rpm

PIK 200 = approx. 90 m³/h

PIK 250 = approx. 200 m³/h

PIK 300 = approx. 400 m³/h

PIK 350 = approx. 860 m³/h

5. Cooler connection

R 3/4" internal thread

6. Oil flow

With an oil flow exceeding the figures stated in the above diagramme, please consult with our engineering department.

Phone: +49 5971 798-0

Oil/water cooler type PHE

Cooling systems

High power density in a tight space

Technical data

Plate heat exchanger made of stainless steel 1.4401 soldered to copper. The stamped plates generate a high power density in a tight space. Compared to a bundle of pipes heat exchanger, the plate heat exchanger only requires approx. 25 % - 30 % of mounting space with less weight. Applications are, as an example, machine tools, test benches, moulding machines, pump units, waste heat utilization, etc. It is possible to use other media like, for example, oil, water glycol, water, refrigerating agents, air, etc.

Operating temperature: -10 °C to +200 °C.

Please observe boiling point and freezing point!

Maximum permissible operating pressure: PHE 100: 10 bar / PHE 200 - 500: 30 bars

Oil/water cooler TAK/TP

Cooling systems

Cooling of lubricating oil, heat recovery

The cooler ranges TAK/TP were originally designed for hydraulic systems, but they are equally suitable for cooling lubricating oils, heat recovery, etc.
The tube bundle is designed in that it may expand to both sides, consequently minimizing thermal stresses. The unique tube-to-tube plate joint ensures high reliability.

Materials used:

These coolers are available in both industrial and marine versions. (Tube bundles made of stainless steel on request)

Industrial version (standard)	
Tubes	Brass (EN CW614N)
Tube retainer	Brass
Housing	Aluminium
Headers	Brass (EN CW614N)
Gaskets	Nitrile

Marine version	
Tubes	90/10 copper/nickel

Summary of literature

No matter if a perfect drive, a brake that takes effect, space-saving cooling or accurate hydraulics is required, if on land, by sea or at an airy height - KTR's product portfolio is just as manifold as its applications. The following catalogues and leaflets provide an overview. Available at www.ktr.com
